Midterm proposal

Smart Recipe & Fridge Website

Turn ingredients you already have into meals before they go to waste.

Concept / Theme

A website that turns fridge ingredients into recipe ideas.

The site helps home cooks track ingredients, notice what is expiring soon, and quickly choose meals based on what they already own.

Target visitor: students, busy home cooks, or anyone who forgets food in the fridge

Main problem: "I have ingredients, but I do not know what to cook"
Design goal: make cooking feel easier and reduce food waste

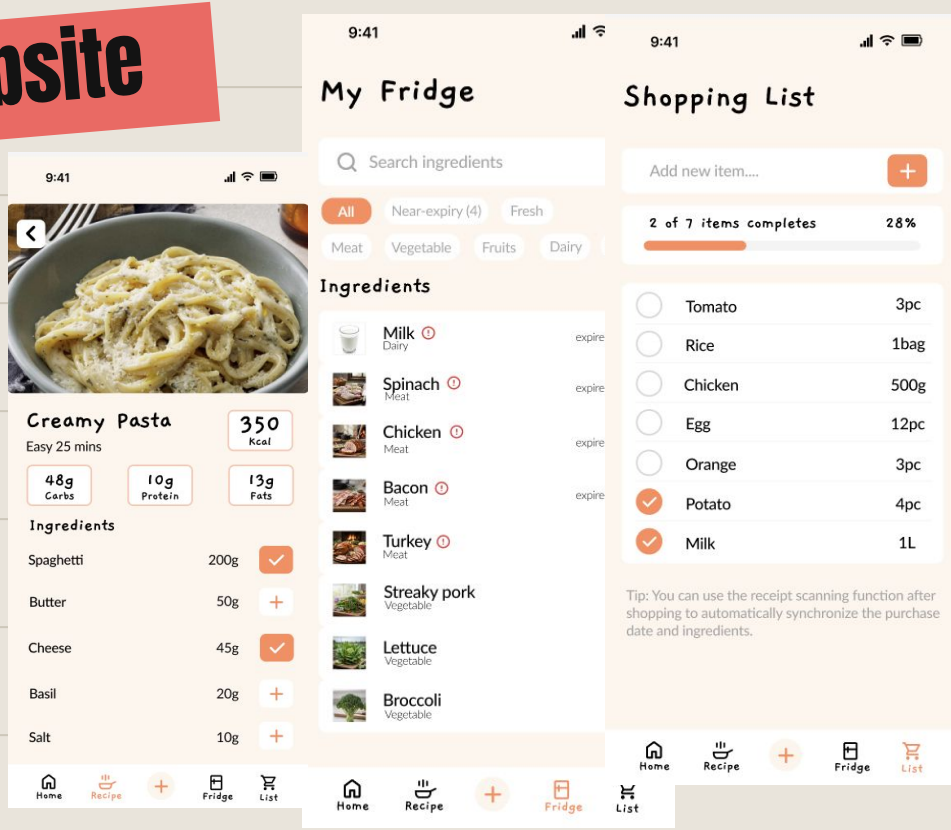

From Mobile App to Website

Original mobile prototype

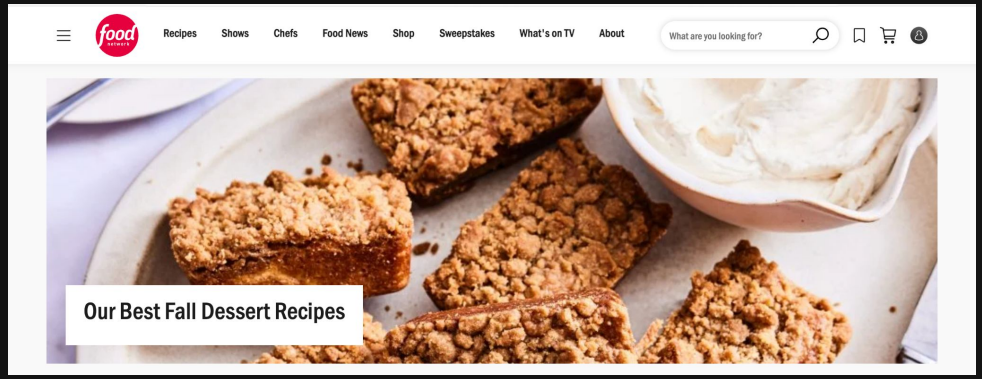

- Fridge inventory is the main focus
- Designed for quick mobile use
- Bottom navigation
- Small recipe cards

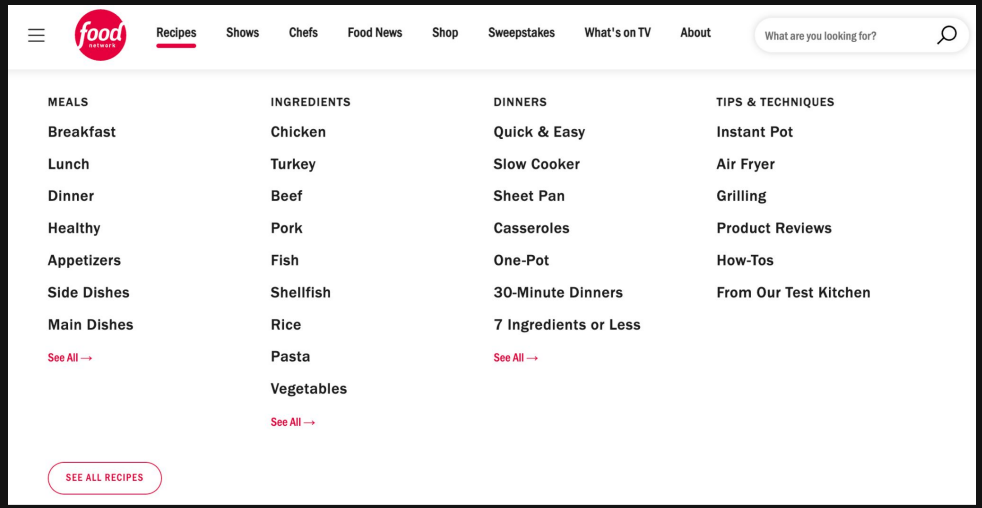

Website version

- Recipes become the main focus
- Larger recipe images and card layouts
- Desktop navigation
- More space for browsing and filtering
- Responsive layout for different screen sizes

I want to keep the original concept and visual identity, but redesign the experience for the web.

Inspiration

What I want to take from it:

- Large food photography
- Recipe card layout
- Recipe categories
- Clear navigation
- Grid-based browsing
- Strong visual hierarchy

What will be different:

- Recipes are based on ingredients the user already has
- Expiration information is part of the experience
- My design uses a warmer, simpler visual style

Skill I will use

Box Model & Layout

- Recipe cards
- Ingredient cards
- Sections and spacing

Flexbox

- Navigation
- Recipe card layouts
- Ingredient sections

Positioning

- Text and buttons over the hero image
- Labels on recipe cards

Dropdown Navigation

- Recipe categories / navigation menu

Hero Section

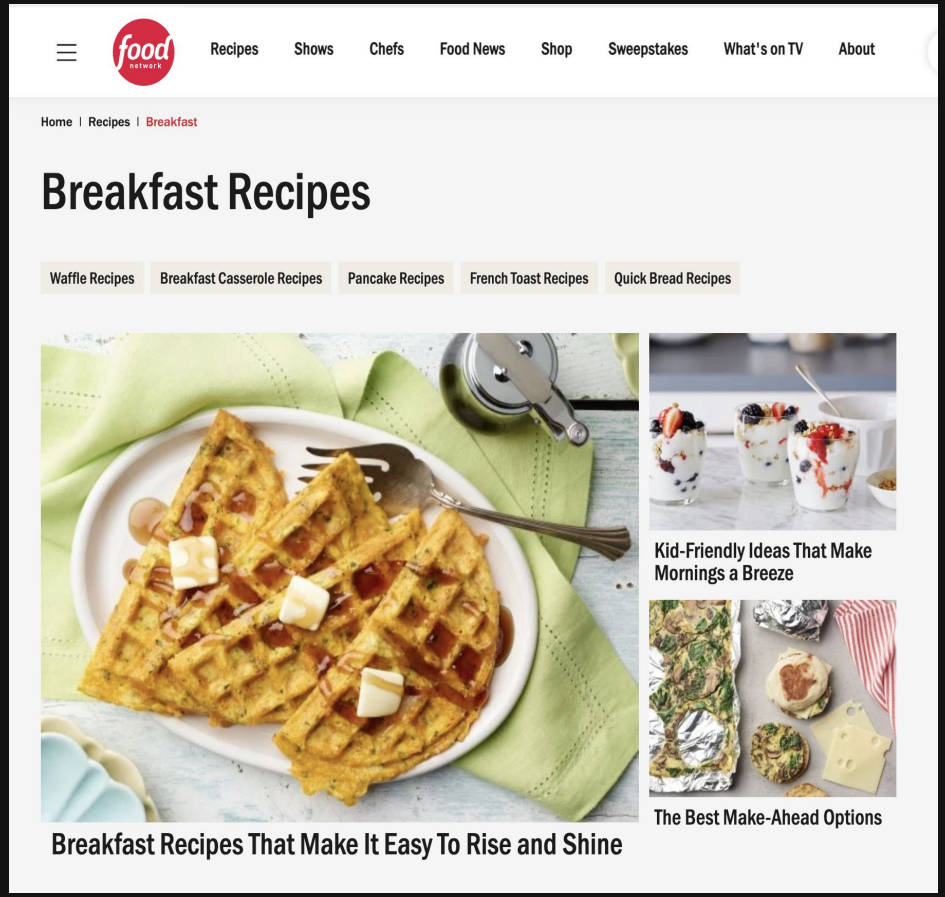

- Large food image
- Headline and button over the image

Hover

- Recipe cards can change slightly when users hover

Information Architecture & UX

- Organizing pages and navigation clearly
- Making recipes easy to find

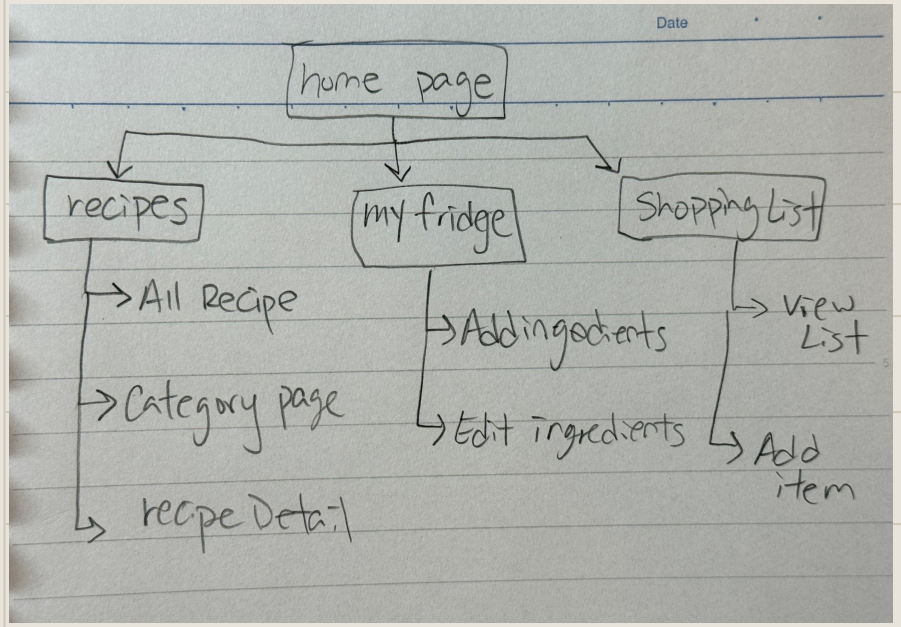

What I Still Need to Learn

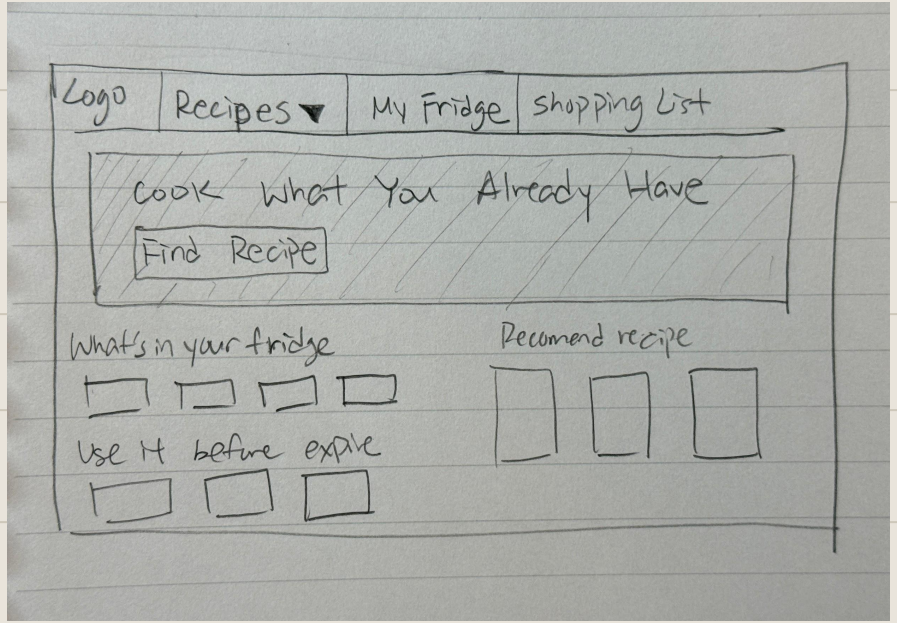

How to adapt my mobile prototype into a desktop website?

How to make the layout responsive on both laptop and phone?

How to keep the design consistent across 2–3 pages?

Wire frame and site map

Mood Board
